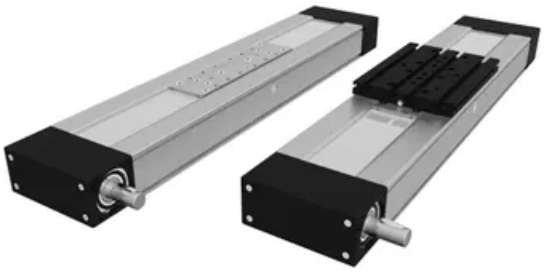
Linear Unit CTJ 145

The CTJ series includes linear units with a toothed belt drive and two parallel, integrated, zero-backlash rail guides. In the linear units CTJ is used a pre-tensioned steel reinforced AT polyurethane timing toothed belt. In conjunction with a zero-backlash drive pulley high moments with alternating loads with good positioning accuracy, low wear and low noise can be realized.



The in the profile slot driving timing belt, protects all the parts in the profile from dust and other contaminations. Re-lubrication can be done through maintenance holes on the side of the profile.

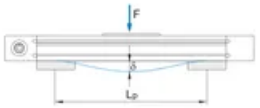
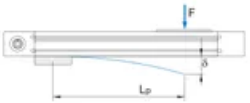
Deflection of the linear unit

CTJ

Fixed - fixed mounting



Fixed - free mounting



δ Maximum deflection of the linear unit [mm]
δmax Maximum permissible deflection of the linear unit [mm]
F Applied force [N]
Lp Unsupported profile length [mm]

The maximum permissible deflection δmax must not be exceeded. In the case that maximum deflection δ exceeds the maximum permissible deflection δmax additional profile supports are needed.

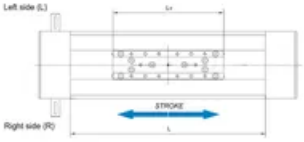
Defining of the linear unit length

L = Effective stroke + 2 × Safety stroke + Lv + 25 mm

Ltotal = L + 138 mm



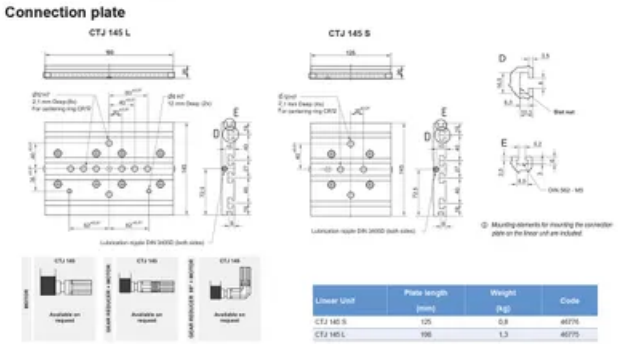
Lv - Long carriage = 240 mm
Lv - Short carriage = 180 mm

Double-Carriage

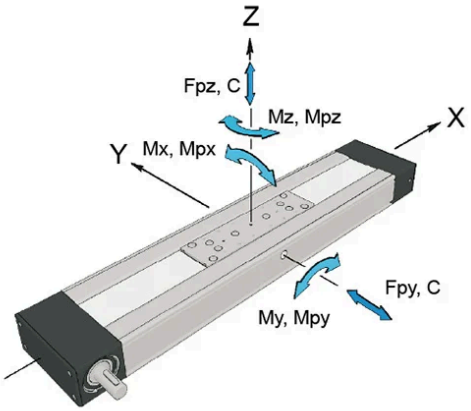
① Only with short carriage version.

① *For ordering code please contact Rollco.*

L = Effective stroke + 2 × Safety stroke + A + 205 mm
Ltotal = L + 138 mm
A ≥ 180 mm



General data



For length/stroke over the stated value, please contact Rollco. Values for max. stroke are not valid for double carriage (equation of defining the linear unit length for particular size of the linear unit needs to be used).

For minimum stroke below the stated value, please contact Rollco.

Recommended values of loads
All the data of static and dynamic moments and load capacities stated are theoretical without considering any safety factor. The safety factor depends on the application and its requested safety.
We recommend a minimum safety factor (fs =5.0).
