

## MGBS

The MGBS is a ball screw driven mini linear unit where the rotary motion (rotation) of the drive shaft is converted to the linear motion (translation) of the carriage with high mechanical efficiency and low internal friction.

High-performance features such as high speed, good positioning accuracy, and high repeatability are ensured through a precision ball screw drive and a linear guiding system.

A preassembled standard motor (in-line with a motor adapter and a coupling or in-parallel with a motor side drive and a timing belt) together with a standard drive, makes the system plug and drive ready. Compact dimensions and optimally selected motor combinations cover a wide range of applications.

Options, such as different ball screw leads, together with a wide range of accessories and possible multi-axis system combinations make this product highly flexible.

□ = Square cross section

Dimensions in mm.

For other CAD files, please contact Rollco.

**Ambient Temperature (°C):** 0 °C ~ +50 °C

**Ambient Temperature without a Motor (°C):** 0 °C ~ +60 °C

**Protection Class:** IP40

**Duty Cycle:** 100 %

**Maintenance:** Life-time pre-lubricated

**MGBS with motor and motor adapter VK**

1. Carriage
2. Aluminium profile
3. Drive block
4. End block
5. Mounting slots
6. Slot for the magnetic field sensors
7. Corrosion-resistance protection strip
8. Motor adapter VK with a coupling
11. Preassembled motor (with/without a brake)
12. Standard connectors (motor, encoder and brake - optionally)

**MGBS with motor and motor side drive MSD**

9. Motor side drive MSD with a timing belt
11. Preassembled motor (with/without a brake)
12. Standard connectors (motor, encoder and brake - optionally)

**MGBS without motor**

5. Mounting slots
6. Slot for the magnetic field sensors
10. Drive shaft of the precision ball screw drive

## General Data

The moved mass is already considered in the equation for calculating the mass of the linear unit  $m_{MGBS}$  and the mass moment of inertia  $J_{MGBS}$ . The moved mass includes the mass of the carriage together with the ball nut.

For the combination with a standard motor and motor adapter VK or motor side drive MSD the mass  $m_{MGBS}$  should be increased by  $m_{VK+m}$  or  $m_{MSD+m}$  respectively.
