

Rolco Belt Conveyors

Here at Rolco we pride ourselves in being able to meet the needs of every customer as quickly and efficiently as possible, and our conveyor belt series is no exception.

As a standard, the conveyor series is built upon an aluminium profile base with a stainless-steel slider bed and a mix of aluminum and steel components. We offer a wide range of standard belts. Should you need more specialized belts, please contact us. We have more options available to cover all requirements.

Drive pulleys and head/ tail pulleys are generally trapezoidal crowned for belt tracking and are made from either aluminium or steel. Alternatively, or additionally, a guiding profile can be added to the belt.

The conveyors are available in two sizes, BF40 and the larger BF80. The size is often determined by the accumulated weight, size, or amount of the goods needed to be transported and are either end- or center-driven. Center-drives are always preferable for reversing operations.

All widths are available, however trending widths have been brought forward for better efficiency. Conveyor lengths are always made to order.

New to 2021 we have now released our standardised Ø20 knife edge conveyor, ideal where two conveyors meet.

Declaration of Conformity

The BF conveyor series conveyor is a partly completed machine and follows the machinery directive 2006/42/EC Annex II 1B. Therefore, responsibility lies with the consumer to complete the risk assessment for his/her application according to the machine directive.
